

The Smallest Wingbeat

Lyrics: Anette Prehn, 2018

Music: Rasmus Skov Borring, 2018

Translation: Heidi Flegal and Anette Prehn, 2019

How can there be such po-wer in a wing-beat that dis-tant but-ter-flies can brew a storm? Just bits of
 co - loured gos-sa-mer and string-feet, how can their flut-ters take on mas-sive form? Re-
 mem-ber, ants can build an ant-worldmoun-tain like ti - ny di-gits in a gi-ant sum. Though
 we may feel like drop - lets in a foun - tain, we're part of Earth's great e - qui - li - bri -
 um. As bree-zes blow and cot-ton clouds go drif- ting, I re - a - lize how
 close - ly we are bound: The smal-lest wing - beat joins with o - thers, lif - ting
 each cir - cle that we share as Earth turns 'round.

1. How can there be such power in a wingbeat that distant butterflies can brew a storm? Just bits of coloured gossamer and string-feet, how can their flutters take on massive form? Remember, ants can build an ant-world mountain like tiny digits in a giant sum. Though we may feel like droplets in a fountain, we're part of Earth's great equilibrium.

As breezes blow and cotton clouds go drifting, I realize how closely we are bound: The smallest wingbeat joins with others, lifting each circle that we share as Earth turns 'round.

2. My childhood seemed a playful sunny Sunday with hide-and-seek in gardens ever young. A butterfly sat on my finger one day. I giggled at its tickly roll-up tongue. Yet more than just a touch of beauty passing, I see today that butterflies have might. I picture all our graceful beats amassing, like Monarchs in a grove that join in flight.

As breezes blow and cotton clouds go drifting, I realize how closely we are bound: The smallest wingbeat joins with others, lifting each circle that we share as Earth turns 'round.
